Client-server or desktop imposition workflow

QuickFACTS

- Output to CTP (platesetters) & CTF (imagesetters)
- JDF, PJTF to interface with: Low-Res FPO systems, Rampage (NORM/ROOM), Creo Brisque & Prinergy, AGFA Apogee and ApogeeX, Xitron Xenith, FujiFilm Celebrant, EFI OneFlow, ArtWork Systems Odystar, Xitron Xiflow and others
- Full imposed PS, EPS and PDF signature preview
- Desktop or client-server workflow
- PDF workflow support, PDF-in, PDF-out, without converting the PDF files to PS
- Origami virtual paper folding for easy template making
- Repeating booklets: outputs as a perfect bound, saddle stitch or a combination of both
- Industry first built-in color bar creator and editor
- Ganging: Mix independent page sizes in templates
- Sectioning: Recreate signatures with groups of pages
- Unlimited output size and tiling support CTF devices
- PDF, PS, EPS, TIFF in / PS, PDF, JDF out
- Automated hot folder or manual imposition workflow
- Web growth support, bottling and shingling
- Display impositions for up to 6 Webs on screen
- Free Quickstart training video

Impose files faster with client-server imposition workflow

ImpoStrip Solo is a client-server or desktop imposition software application that enables prepress and print professionals to image more film and plates everyday, because of its innovative workflow architecture. ImpoStrip Solo includes the ImpoStrip imposition client and ImpoStrip Server, client-server architecture allows you to keep massive prepress files on a central server, and not move them across networks, saving valuable production time. Solo provides all the features found in its sibling ImpoStrip, with the exception of PPF workflow and sectioning, Full Plate for free form ganging (can be added as an option to Solo). Solo is limited to ONE client Imposition workstation.

Interactive imposed signature preview & plate concept

Do you want to see what your imposed signature will look like? Solo provides a full real-time imposed signature preview, make adjustments to the signature and see the changes live. Solo supports plate concept - make adjustments to your press sheet or pages while creating or editing an imposition template.

ImpoStrip supports your files & your customers' files

ImpoStrip imposes PDF, PS, EPS, and TIFF files. ImpoStrip outputs PS and PDF files as well as JDF files. With over 150 PS filters, including QuarkXPress 6, Adobe Acrobat 6, InDesign and Illustrator CS and many more, throw almost any job at ImpoStrip.

Supports your shop - ctf, ctp, sheetfed, web...

Use Solo to print your imposed jobs to proofers, imagesetters, platesetters. Solo can output imposed jobs to RIP hot folders as PS or PDF files, or print to any PostScript device via Appletalk and IP printing. Solo supports PPDs, making printing easier, more accurate. Solo supports commercial sheetfed and high volume web, even up to 6 webs on screen at once.

Complex Impositions and Ganging built-in!

ImpoStrip now makes it easier to work with complex imposition jobs. Do you have independent pages in different sizes? ImpoStrip now has template based ganging built-in, with a couple of mouseclicks you can quickly impose your files. Mix PDF, PS, TIFF or EPS files on the same signature, regardless of their size - complex jobs just got a lot easier. Free-form ganging is also available as an option.

Origami for fast easy templates and the Color Bar Editor

Use predefined templates bundled with ImpoStrip or use Origami to create new imposition templates. Origami is a virtual paper folding tool built-into ImpoStrip. Origami allows you to fold your press sheet on screen, automatically keep pages in the proper imposed order and orientation and can add fold marks automatically - once complete, add your own crop marks, and color bars to your templates. Unlike competing solutions, ImpoStrip allows you to make, modify and save templates and re-use them for other jobs, saving valuable production time. ImpoStrip also has the print industry's first built-in color bar creator/editor which provides the convenience of creating color bars directly within ImpoStrip, increasing print color accuracy saving valuable production time..

Automated or hands-on imposition

Are you tired of recreating the same imposition template over and over for similar jobs? Save time with Solo. Create a Hot Folder workflow in Solo to automate the process of Imposition. Drag and drop files into an active hot folder associated to your preferred imposition template and Solo will automatically impose the files and send the imposed file to the RIP when complete. • Automated numbering and renumbering of pages • Automated plate geometry • Automated tiling to use larger plates with smallest CTF device • Automated mirroring of numbering, orientation and gutters *and many more automated features.*
