Dalim Software certifies Ultimate's Imposstrip Mac OS X for distribution with its workflows

Kehl, Germany – Dalim Software, the leading developer of innovative and professional workflow solutions, and PDF-PostScript workflow provider Ultimate Technographics today announce that the Imposstrip software family (including Imposstrip Solo and IMPress) can be fully integrated with the DALiM TWiST™ and DALiM SWiNG™ flexible workflow automation solutions. This announcement underscores Dalim Software and Ultimate's commitment to offer advanced tools to the Mac-based prepress and publishing community worldwide.

"Imposstrip's unique client-server architecture provides a strong PostScript and native PDF remote imposition tool," says Stéphane Georges, Software Product Manager at Dalim Software. "TWiST and SWiNG generates low-res page images for imposition manipulation, while maintaining the high-res originals secure on the server ready for OPI replacement on output. As a result, file movement across the network is reduced and production speed maximized. Our customers now have the freedom to choose a non-proprietary imposition solution from an independent supplier to suit their Windows or Mac platform preference."

"Imposstrip with Dalim Software's Hot Folder and Printing Queue-driven applications are a perfect fit", says Joanne David, VP Marketing at Ultimate Technographics. "We are glad to see DALiM TWiST and DALiM SWiNG's ultra-flexible workflows now capable of offering Imposstrip with an unlimited number of imposition seats to their customers at no extra cost, insuring production growth without overheads."

The industry's open, flexible and highly productive digital workflow, DALiM TWiST is an intelligent solution handling a wide range of complex production tasks automatically. Event-driven reactions can be triggered and determined by a variety of options such as file origin, naming conventions, or absence or presence of certain data such as text or images. The DALiM SWiNG is a suite of workflow automation and management modules that allows users to streamline all pre-press and publishing production processes. It features a set of pre-defined workflows that frees up production time, improves schedules, reduces errors, and ensures consistent quality.

Ultimate's popular imposition family covers all publishing needs starting with the top of the line Imposstrip for unlimited users with CIP3 and job ganging for large commercial printers, Imposstrip Solo client-server for mid-size printers and IMPress for digital printing and Print on-

Demand with high-speed color printers and digital presses. All Imposition products from Ultimate use Hot Folder automation.

About Ultimate Technographics

Ultimate Technographics invented digital imposition just over a decade ago with Impostrip. Ultimate is a leading PDF and Postscript workflow provider for the commercial printing industry with technology leading applications for Imposition, Trapping, Print Management and Ganging. <http://www.ultimate-tech.com>

About Dalim Software GmbH

Dalim Software is a privately held organization whose mission is to maximize the productivity of its customers in the printing and publishing industries by offering high-end software solutions designed to facilitate and automate the entire processing of files prior to printing. The company is a leading supplier of large-scale production systems for printers and publishers worldwide.

Dalim Software brings productivity optimization to PDF and PS workflow with DALiM LiTHO™, DALiM TWiST™, DALiM SWiNG™, and DALiM FiCELLE®. Based on a completely open architecture with well-defined APIs. DALiM portfolio products run on a standard hardware platform with JDF full operativity.

Ultimate complements DALiM's workflow with Impostrip unique client-server architecture giving full remote access to all imposition parameters and preferences for the creation of hot folders.

'Impostrip's unique client-server architecture provides a strong PostScript and native PDF remote imposition tool offering

are utilised, and the company's object-oriented approach to software development ensures that future solutions can be simply and efficiently incorporated. Another fundamental requirement is that software should be optimised, ensuring tasks handled by DALiM Software products are performed in the shortest possible time. All Dalim Software products can be used independently, in conjunction with other vendors' equipment, or as part of an integrated publishing system. Dalim Software's commitment to design, development, training and technical support provides an excellent basis for an interactive, long-term partnership between the company and its customers. www.dalim.com
